

THE PROCESS OF TEDxNIS PROJECT IN NAZARBAYEV INTELLECTUAL SCHOOL IN KAZAKHSTAN

Arysbayeva Saltanat DAURENOVNA

Nazarbayev Intellectual School of Physics and Mathematics direction in Shymkent Teacher-organizer-curator, Kazakhstan

ABSTRACT

What is TED? Where did the TED come from, and how it was created. There is also information about TED in Kazakhstan, about TEDxNIS in Nazarbayev Intellectual Schools, about the features and achievements of children in the project.

Keywords: TED in Kazakhstan, discussion, interviews, TEDxNIS, ideas, active members, project, search

In the new century, a new society has emerged in new Kazakhstan. If I say New Kazakhstan, I am not scared because we have changed the way of living with our old tradition. The reason I'm trying to say is that the whole thing, the surrounding community, and the surrounding people are also new in their thinking and beliefs. It is no secret that some are connected with the spiritual revival nowadays, some of which are combined with history and contemporary views, combined with great thoughts. Your surroundings, society, technology and psychology are opposed to your stay. They want you to search, reproduce. Here is a TED project, one of the most wonderful projects in the world, which has its own place and demand in this unique period. The project has already been in Kazakhstan for several years, but has already found its audience. For the first time in five years, I noticed during the TEDx NIS project for students at Nazarbayev Intellectual School in Shymkent that initially, most of the enthusiastic people who came to listen to others' opinions were moved to share their ideas.

In general, let's answer the question of TED. TED - helps you to master new knowledge rapidly. It teaches people not to be afraid of changes, they are quick and understandable to new ones. "The purpose of the project is to promote science. There is a lot of issues in our society that are not so much in the minds of our people. At TED, people are talking about an idea, a new idea. That's why it's also worth spreading. I would say that TED is a science-generating platform, and it's not an ordinary environment, but where each issue is different from one another.

TED is a reduced form of English technology, entertainment, and design. In 1984, the first TED conference in California was held. The current TED is a nongovernmental organization founded on the same conference. Depending on the different topics: TED Conference, Science, Education, and Business is held two to three times a year. The best speakers of the world come here and present their reports. Unlike a scientific conference: the speaker is given a maximum of 18 minutes. They aim to expose scientific themes by giving them a sense of humor or guiding them to a particular emotion. For what? It's easy for people to remember.

Previously, TED was not popular in Kazakhstan. Because many people are unaware of the project and are not fully aware of the project. TED reports were also available only in English. This situation has changed. Because the number of TED translators has increased. Among the population, the English language proficiency was also increased. Usually all scientific articles are not offered free of charge. You need to buy scientific journals and scientific documentaries. From the first moment, TED has uploaded its own videos to the site. However they were only in English. Translators appeared and translated videos into their own language. This led to the organization of TED in other countries.

From our country to the TED was the Minister of Education and Science Yerlan Sagadiyev. The main idea of the Minister was about three languages politics. It was translated into English. Now it is translated from this language into other languages. So, the idea of Erlan Sagadiyev has the ability to translate and spread in 155 languages. Other teachers, students who know this also have a special interest in the project.

At some republican conferences, there are fewer reports in the Kazakh language, mostly in Russian. But there is more demand for TED in Kazakh. Taking into account the lack of speakers in the Kazakh language, I intend to involve children in this project. For example, a TEDx Shymkent conference was performed by a man who built the underground museum in Kazakh language. It was one of the most interesting ideas to explain the story differently. It was not only possible to say or speak, it was also possible to do a work of art, music, and painting.

TEDxNIS clubs at Nazarbayev Intellectual School were established in 2012 with the support of WikiBilim Public Foundation. Today, about 500 pupils from 19 Intellectual Schools have been admitted to this club. Members of the club will discuss the public lectures and ideas of leading scientists, who are fluent in Russian, Kazakh, English and other people. They also prepare a TED text report on the topics they have chosen. Club members fully master the skills of logistics, speaking skills, organizational skills, speaking skills and the internet. Responding to his opponent's opinion, he learns to defend his point of view, make decisions for the group and for himself. To date, students of the Intellectual Schools have been developing and participating in several national TED conferences and internships

So, what does this project give to Kazakhstan and Nazarbayev Intellectual Schools? Students are encouraged to develop skills such as research, partnership, oratory, developing a diverse set of views and opinions, speaking to the group, listening to others, realizing their potential, thereby promoting the contribution of the pupil to the development of the personality. The reason is that the Intellectual schoolchildren, in particular, have a lot of strong and talented children with unique, interesting, and scientific ideas. I can say that contributing to the release of new ideas of students in this project is important for the development of our state. When the project was first opened, many students did not pay much attention to what kind of project it was.

We tried to explain as much as possible. The club was created by collecting students interested in obtaining questionnaires from children and exploring what they want to see in the project. Students first made their reports and shared with others. We have been directing and advising. Over time, we have seen that other students have been particularly impressed with their new ideas and were willing to take part in it.

Discussions at the Nazarbayev Intellectual Schools are conducted in a transparent, entertaining, polite and ethical manner, and encourage students to actively participate in the discussion.

In the club, learners will be able to ask questions, answer their opponents' questions, analyze answers, and express their opinions on the issue.

Within the framework of the club, pupils will listen and discuss short public lectures by leading scientists and inventors around the world. They also prepare reports on their selected topics in TED format. It also offers traditional conferences.

My task is to prepare Kazakh and Russian speaking speakers at school. According to the research, this year's TEDxNIS has been an interesting one. For five years people have begun to learn this project. Anyone does not come to the conference. Because not all of the same scientific conferences can be interesting or understandable. A person who wants to become a member of the club will fill in a question about why he / she wants to become a member of this project. We will then select them. TEDxNIS focuses on non-numeric but quality. In this project the children will share ideas in Kazakh, Russian and English, which will be placed on social networks. This will allow it to be translated into other languages. Thus, the idea of one person spreads around the world. The motto of TED is to create conditions for propagation of strong idea.

When preparing children for the project, we teach them to create a good, high-level, incredible story. People who have been looking for unique ideas throughout life, give it to the people, be honest! Share your dreams, passions, and even fears. Do not be afraid that they will see your weaknesses. Tell about your failures and accomplishments. Communicate with the audience. We are all human beings, so we understand the language of emotion. Make people smile, laugh, move and do not be proud of it. We all teach each other to not be proud of yourself otherwise you will lose the audience interest in you, so be careful.

To date, club members shared their ideas on the theme: "Are you a citizen of the world?", "Eternal country and spiritual revival", "Activity to society", "550 Years to the Kazakh Khanate", "Interesting Ideas for School", "Best Ideas of the 21st Century" "Youth and the future of the country", "Youth - the future of the future!" and others.

Project activists share ideas that are not only limited to school but also ideas worth spreading in other educational institutions. For example, students of the "Zhas Otan - Zhastar Kanaty" named after M.Auezov, students of the Miras University, students of the Nazarbayev Intellectual School of Chemistry and Biology in Shymkent, together with students of the "Traditions Center" they attempt to share ideas and share ideas with others as possible. I noticed that students were participating in competitions with new ideas and ideas have the ability to express their thoughts, argue, reasonably defend their opinion, respect other people's thoughts, attitudes, listen to respect for others, make personal and group decisions, and participate in various intellectual activities and Also, their confidence in themselves is growing and we are glad that they are trying to discover other aspects. Giving children such projects that can be used to be competitive in life and future professional careers, Of course, our goal is to fulfill.

However, during the course of the project I can not say that everything was perfect and easy to understand. Every year, a new child joins the project. They want to get on the stage and draw the attention of the country. At first, they afraid to express their idea, or they want to come up with an idea and ask help to improve and supplement their idea when. And, of course, after being a leader, I have to concentrate all my efforts on developing it. Despite the lack of time, I learned to help when I see students hoping to continue their idea. I have learned to be in their place. It's not just about supporting the children in the project, but in my pedagogical work, in any case, I understand the value of the further development and understanding of what the person in front of me wants to say. It's not just about supporting the children in the project, but also about the value of developing and understanding the game that comes to my mind when it comes to pedagogical work. At the same time, I understood the importance and value of public work. The reason for this project was the social work of school. Worldwide TED philosophy also suggests useful work for the community rather than money. No remuneration is paid to the translator, the speaker or the organizer. But their professional growth is provided. The strength of the TED conference is there.

My motivation for this project is encouraged by the lights in the eyes of the children. Our mutual feedback after each conference is a good impression. Why am I interested in this project? The reason is that I found an idea out of my mind and strong motivation. The strong motivation is the fire in the eyes of the project members. There is a saying that person must change himself first to change the world and society. Indeed, first we must change ourselves. We should not expect TED to

come to the Kazakh society. Each of us has to make changes in the right direction. It seems to me that only positive changes will take place. At any time, the active members of the society were few. And it doesn't mean that all 17 million people should be super active. The idea behind the TED is that the people who have the idea of the Kazakh people come out of our society, and our children have their own ideas in the world and in the big space, our goal has been achieved.
